INTRODUCTION

- ❏ **Online chat** may refer to any kind of communication over the Internet that offers a real-time transmission of text messages from sender to receiver.
- ❏ Chat messages are generally short in order to enable other participants to respond quickly.
- ❏ Thereby, a feeling similar to a spoken conversation is created, which distinguishes chatting from other text-based online communication forms such as Internet forums and email.
- ❏ Online chat may address point-to-point communications as well as multicast communications from one sender to many receivers and voice and video chat, or may be a feature of a web conferencing service.
